

Indian Servers

Internship Innovation Challenge

AI Model Development Contest

Only for Interns of Indian Servers

INR 5,000

Cash Prize

LAST DATE

22 May 2026

Submission Format

Post a minimum 2-minute project demo video on LinkedIn.

Tag Indian Servers and Sai Satish. Include suitable hashtags.

01

Interactive AI Learning App

Education + 3D + Quiz

PROBLEM STATEMENT

Build an AI-powered interactive learning application on any subject. The app should make learning visual, practical, and engaging for students through 3D/2.5D models, simulations, quizzes, and AI-based explanations.

Scope / Instructions

- Subjects may include Biology, Chemistry, Physics, Mathematics, Computer Science, Robotics, Electronics, Medicine, Finance, Law, Agriculture, or Environmental Science.
- The app should not be a simple PDF reader or static webpage. It must include meaningful interaction and learner feedback.
- Participants may use AI APIs, open-source models, browser-based 3D, Three.js, Unity WebGL, or any suitable technology.

Expected Features

- 3D models or 2.5D visualizations with labels/exploration mode
- Topic-wise AI explanation using text and/or voice
- Interactive quiz with instant feedback and score
- Simulation, animation, drag-and-drop, or practical activity
- Clean mobile-friendly UI and progress tracking

MINIMUM DELIVERABLES

- Working demo shown in video
- At least 3 learning modules or interactive screens
- Explanation of AI/model/API used

SAMPLE IDEAS

3D Cell Explorer, AI Periodic Table, Physics Simulation Lab, Math Tutor, Data Structures Visualizer.

02

AI Medical Assistant Bot

Healthcare + Vision + Safety

PROBLEM STATEMENT

Develop a responsible medical assistant bot that can respond to health-related queries, summarize reports, and optionally analyze medical images using a strong and safe user interface.

Scope / Instructions

- Participants may use Gemini, Groq, OpenAI, LLaVA, Qwen, or a fine-tuned open-source model.
- The assistant must clearly state that it is for educational/preliminary support only and is not a substitute for a qualified doctor.
- The bot should prioritize patient safety, privacy, uncertainty handling, and emergency red-flag guidance.

Expected Features

- Text-based symptom conversation with safe response boundaries
- Image or report analysis, if technically implemented
- Patient-friendly explanation in simple language
- Emergency warning/red-flag detection
- Beautiful chat/dashboard UI with upload option
- Privacy notice for uploaded medical data

MINIMUM DELIVERABLES

- Video demo of text response and image/report workflow
- Clear safety disclaimer shown in UI
- Explanation of model/API/fine-tuning approach

SAMPLE IDEAS

Skin image triage assistant, medical report explainer, patient FAQ bot, medicine information assistant.

03

AI Legal / Tax Research Assistant

Law + Compliance + RAG

PROBLEM STATEMENT

Create an AI research assistant that helps users understand legal, tax, compliance, accounting, or audit documents with source-based explanations and practical checklists.

Scope / Instructions

- The solution should support document upload, search, summarization, and question-answering.
- Responses should cite or refer to relevant sections, clauses, articles, or uploaded sources wherever possible.
- The app must present itself as research support, not a final legal/tax opinion.

Expected Features

- Ask-your-document chat with references
- Section-wise explanation and summary
- Compliance checklist generation
- Comparison of old vs new provisions, if applicable
- Export/share option for generated summary
- Risk flags and assumptions

MINIMUM DELIVERABLES

- Video demo using sample legal/tax/compliance document
- Show citation/reference capability
- Explain whether RAG, API, or local model was used

SAMPLE IDEAS

GST Case Law Finder, UAE Corporate Tax Assistant, IFRS Explainer, Audit Standards Assistant.

04

AI Business Automation Agent

CRM + HRMS + PMS

PROBLEM STATEMENT

Build an AI agent that automates practical business workflows for sales, HR, project management, finance, operations, or customer support.

Scope / Instructions

- The agent should perform useful actions or generate structured business outputs from natural language instructions.
- It may be built around CRM, HRMS, Project Management Software, Finance, Sales, or Support use cases.
- Role-based access, data security, and auditability should be considered in the design.

Expected Features

- Natural language command interface
- Dashboard with tasks, insights, or workflow outputs
- Lead scoring, resume screening, project alerts, or report generation
- Email/message drafting or follow-up automation
- Analytics charts or business summaries
- Basic security and user-role handling

MINIMUM DELIVERABLES

- Video demo showing one complete business workflow
- Sample data and generated output
- Explain agent logic, tools, and model/API used

SAMPLE IDEAS

CRM Sales Copilot, HR Recruitment Assistant, Project Risk Agent, Invoice Follow-up Agent.

05

AI Agriculture / Environment Intelligence App

Social Impact + Vision

PROBLEM STATEMENT

Develop an AI solution for agriculture, environment, sustainability, or rural impact. The app should solve a real-world problem using AI, computer vision, prediction, or advisory workflows.

Scope / Instructions

- The solution can focus on crop disease detection, pest identification, soil advisory, weather-based farming guidance, pollution monitoring, or waste management.
- Participants may use Gemini, Groq, OpenAI, Qwen, YOLO, computer vision models, RAG, or weather/environment APIs.
- The app should be simple enough for field users and must explain recommendations clearly.

Expected Features

- Image-based detection or advisory chat
- Recommendation with reasoning and confidence/limitations
- Weather or location-aware guidance, if applicable
- Mobile-first design and simple language
- Optional Telugu/Hindi/local language support
- Clear warning where expert advice is required

MINIMUM DELIVERABLES

- Video demo with sample image/data input
- Show recommendation and explanation screen
- Explain model/API/dataset used

SAMPLE IDEAS

AI Crop Doctor, Plant Disease Detector, Soil Health Advisor, Smart Irrigation Guide, Waste Segregation Assistant.

Submission Rules

Submission Guidelines

Post your project demo video on LinkedIn and tag the required profiles.

INR 5,000 Cash Prize

Contest is exclusively for interns of Indian Servers.

Who can participate

Only current interns of Indian Servers are eligible to participate.

Video duration

Minimum 2 minutes. The video must clearly show the working demo and explain the AI/model approach.

Where to submit

Upload the demo video as a LinkedIn post. Keep the post public or visible to reviewers.

Last date

Submit on or before 22 May 2026.

Tagging requirement

Tag Indian Servers and Sai Satish in the LinkedIn post.

Suggested hashtags

#AIContest #IndianServers #AIDevelopment
#BuildWithAI #StudentInnovation

Recommended Evaluation Parameters

Innovation	20 marks	AI/model implementation	20 marks
UI/UX and interactivity	15 marks	Practical usefulness	15 marks
Technical architecture	10 marks	Accuracy and safety	10 marks
Presentation quality	10 marks
